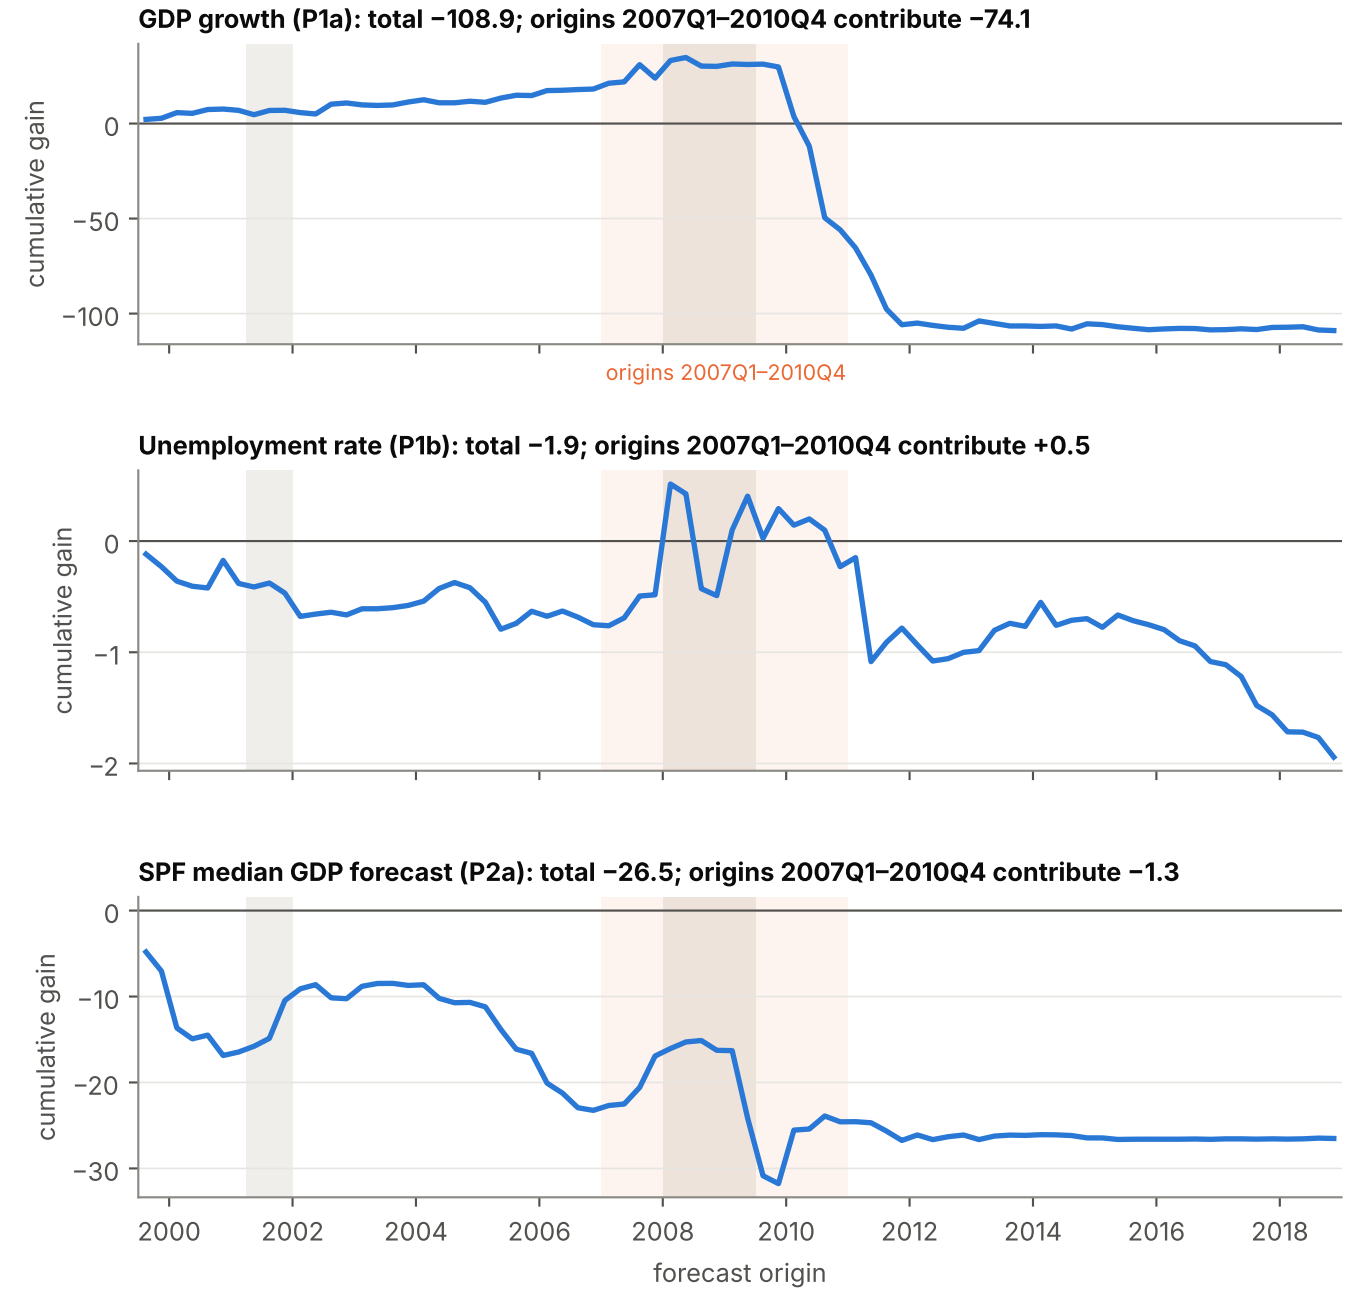
Figure 4. Where credit gained and lost: cumulative squared-error differences



Cumulative sum over origins of (benchmark error² − credit-model error²): rising = credit helping, falling = credit hurting. h = 4; revised targets. Grey: NBER recessions. Orange band: pre-registered 2007Q1–2010Q4 window (§13). Exploratory split S6, GDP RMSE ratio: 0.959 [0.896, 0.982] for origins to 2008Q3; 1.522 [1.148, 1.863] from 2008Q4. Source: locked Phase 2 run.
